

Thank you for shopping at PrintAttack!

To ensure that you have a lot of fun with the product, we recommend the following instructions for applying the sticker.

Step 1: The surface to which the sticker is to be applied must be **perfectly clean and free of grease or oils**. Please **do not use glass cleaner** because it will leave residue behind that will prevent the sticker from adhering well. For best results, use technical alcohol (isopropanol). If you don't have access to this, please remove all residues of dirt and cleaning agents and make sure that the surface is completely dry before applying the sticker. The tidier you do this, the better the sticker will hold.

Step 2: Peel the backing paper off the sticker. Gently place your sticker in desired position. If you are satisfied with the position, fix the sticker in the centre and smooth it down from the inside to the outside. **Normal stickers can only be placed once**, so take your time to find the best position before applying..

Step 3: Here's the protip for full adhesive strength: Blow dry the sticker directly after applying. Don't get the sticker too hot, only so that it is heated evenly.

Tips for perfectionists:

Optimal conditions for applying stickers are at temperatures between 15 and 25 °C and in **without** exposure to direct sunlight.

You can remove small air bubbles with a **squeegee**. If a larger bubble has formed, carefully pierce it with a needle and squeeze out any trapped air left.
